06/2016 - 04/2017   *Thoothukudi*

MINI PROJECTS

Voice Assistant in Email

□ As we know, emails are very important for communication as each professional communication can be done by emails. Voice assistant are programs on digital service that listen and respond to verbal commands. By using NLP we could convert voice input from the user to text and mail it to the receiver which will reduce our time. you can imagine that there will be a huge noise around you in that situation this program fails to predict the audio accurately. To make this script that catches accurate audio we must clear background noises. So, we use pyaudio package to clear the background noise and take the user's voice input.

INTERNSHIP

Undergone a 5 days Implant Training at UNIQ Technologies

Undergone a 7 days Implant Training at Audit Plus

CERTIFICATES

The complete html and css bootcamp
Udemy

Completed a certification course on C programming language
VES Computers

Currently Pursuing Data Science and Data Analytics
Microsoft
